

Temperature Humidity Sensor

Temperature Humidity Sensor Module

The baby description

One can detect the humidity and temperature of the surroundings

2 use DHT11 sensor

3 humidity measuring range: 20% 95% (0 degrees to 50 degrees range), humidity measurement error: + - 5%

4 temperature measurement range: 0-50 degrees temperature measurement error: + - 2 degrees

4 working voltage of 3.3 V to 5 V

5 output form digital output

6 sets of fixed bolt hole, convenient installation

7 small board PCB size: 3.2 cm * 1.4 cm

8 power indicator light (red)

9 every weight of about 8 g

2 module interface specification (3 wire system)

1 VCC external 3.3 V to 5 V

2 GND external GND

3 DO small plate switch digital output interface Answer the microcontroller IO port
